THE POINT OF SALE
SYSTEM THAT PROMISES
QULALITY - EASE - SPEED

FIRST PAYMENT INTERNATIONAL

A sleek design integrated oPOS terminal featuring an ultra slim profile, low power consumption, PLUS an easy to use yet powerfull POS Software system all bundeled with a cost savings merchant services account and POS Support.

FPI-POS

Beneath its elegant, profiled contours and slimline, minimalist style, FPI-POS also features an ultra-thin base housing a CPU which combines reliability and low power consumption, thanks to its 1.6 GHz IN-TEL Atom N270 processor.

With its 15-inch touchscreen and ultra-compact format (6.3kg), FPI-POS can be installed in a trice at any cash desk and is perfect for a broad range of styles and sectors in retail and services. Its fanless design makes it highly resistant even in adverse environments. The metal base offers maximum stability and also acts as a heatsink.

Protected by a "Black piano" elegant polycarbonate flip cover, the hard disk is located in a completely separate compartment to the motherboard: this also helps to minimise the risks of the system overheating. Cables are routed out of sight, concealed in the base.

It has never been easier to add thee benefits of a point of sale (POS) system to your business. FPI-POS offers a feature-rich point of sale system without all the hassle or the high cost.

We simplified the process so you can easily transition from your current transaction terminal to your new state of the art touch-screen POS system. We will help you streamline your business operations and automate your daily management activities.
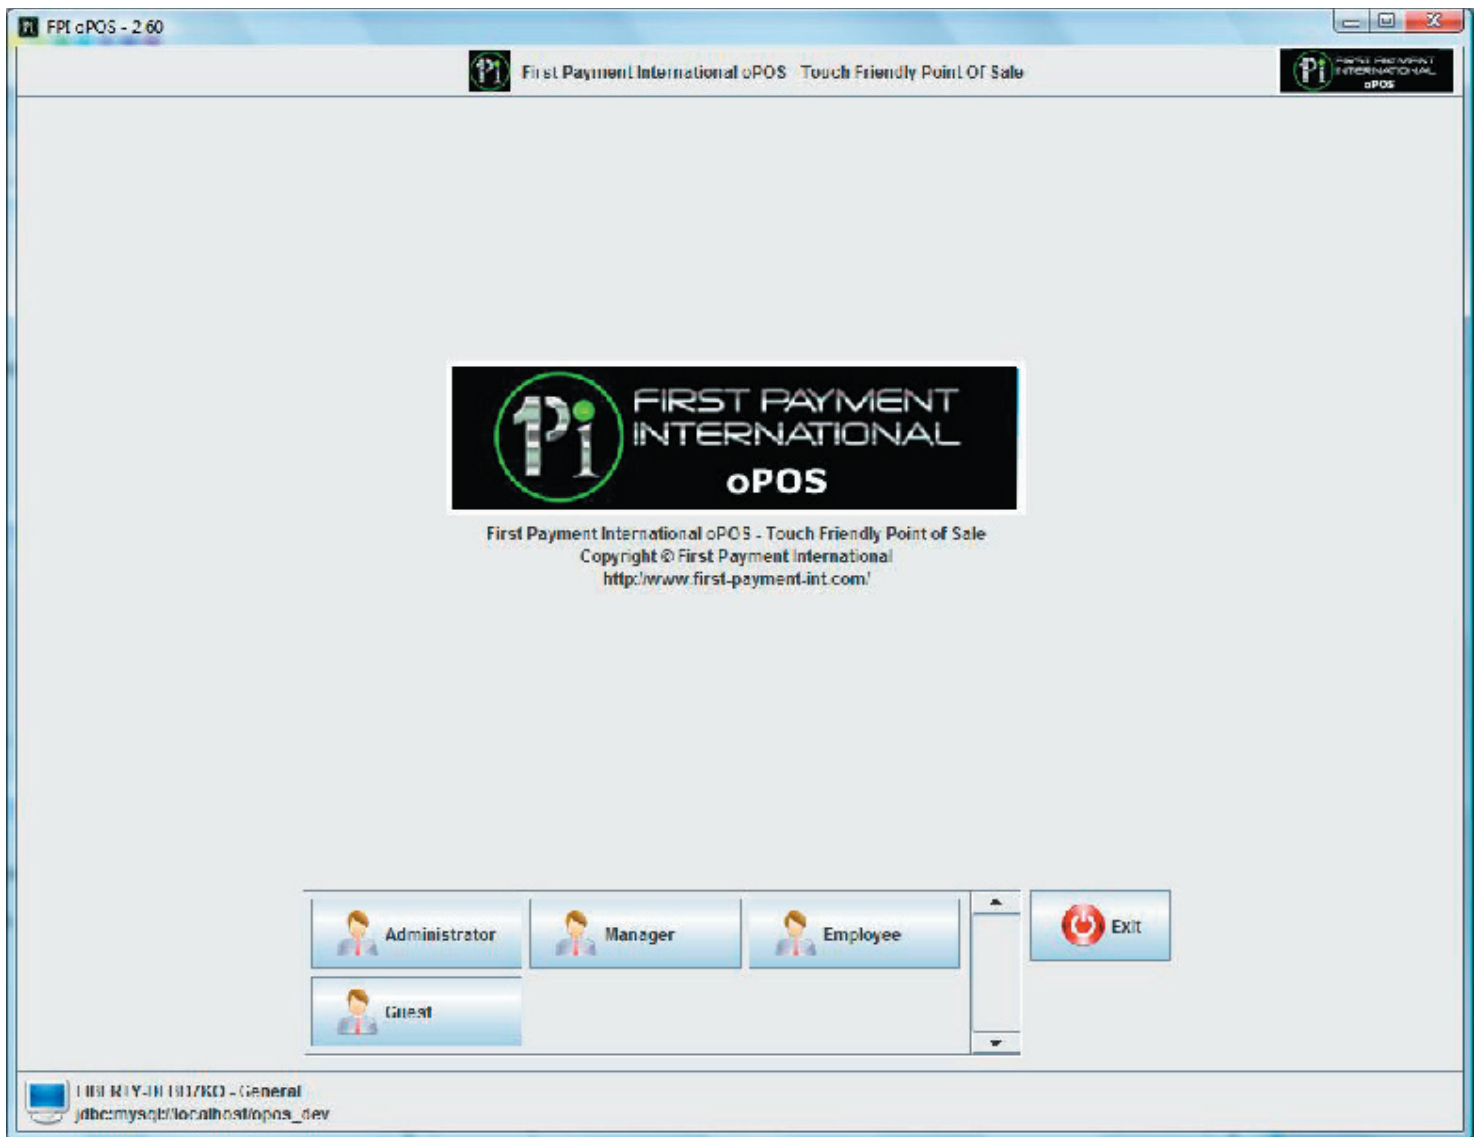

FPI-POS offers countless time and money saving features that will allow you to focus on what's important: Running your Restaurant or Retail Business!

## Contact your local FPI-POS Sales Agent:

Name: _____

Phone: _____

Log-in Screen conveniently shows the names of your employees. One touch on the name buttone will display the password dialog screen.

Roles:
There are 4 levels of customizable roles: Administrator, Manager, Employee, and Guest. The features of the software assigned to each role can be customized.
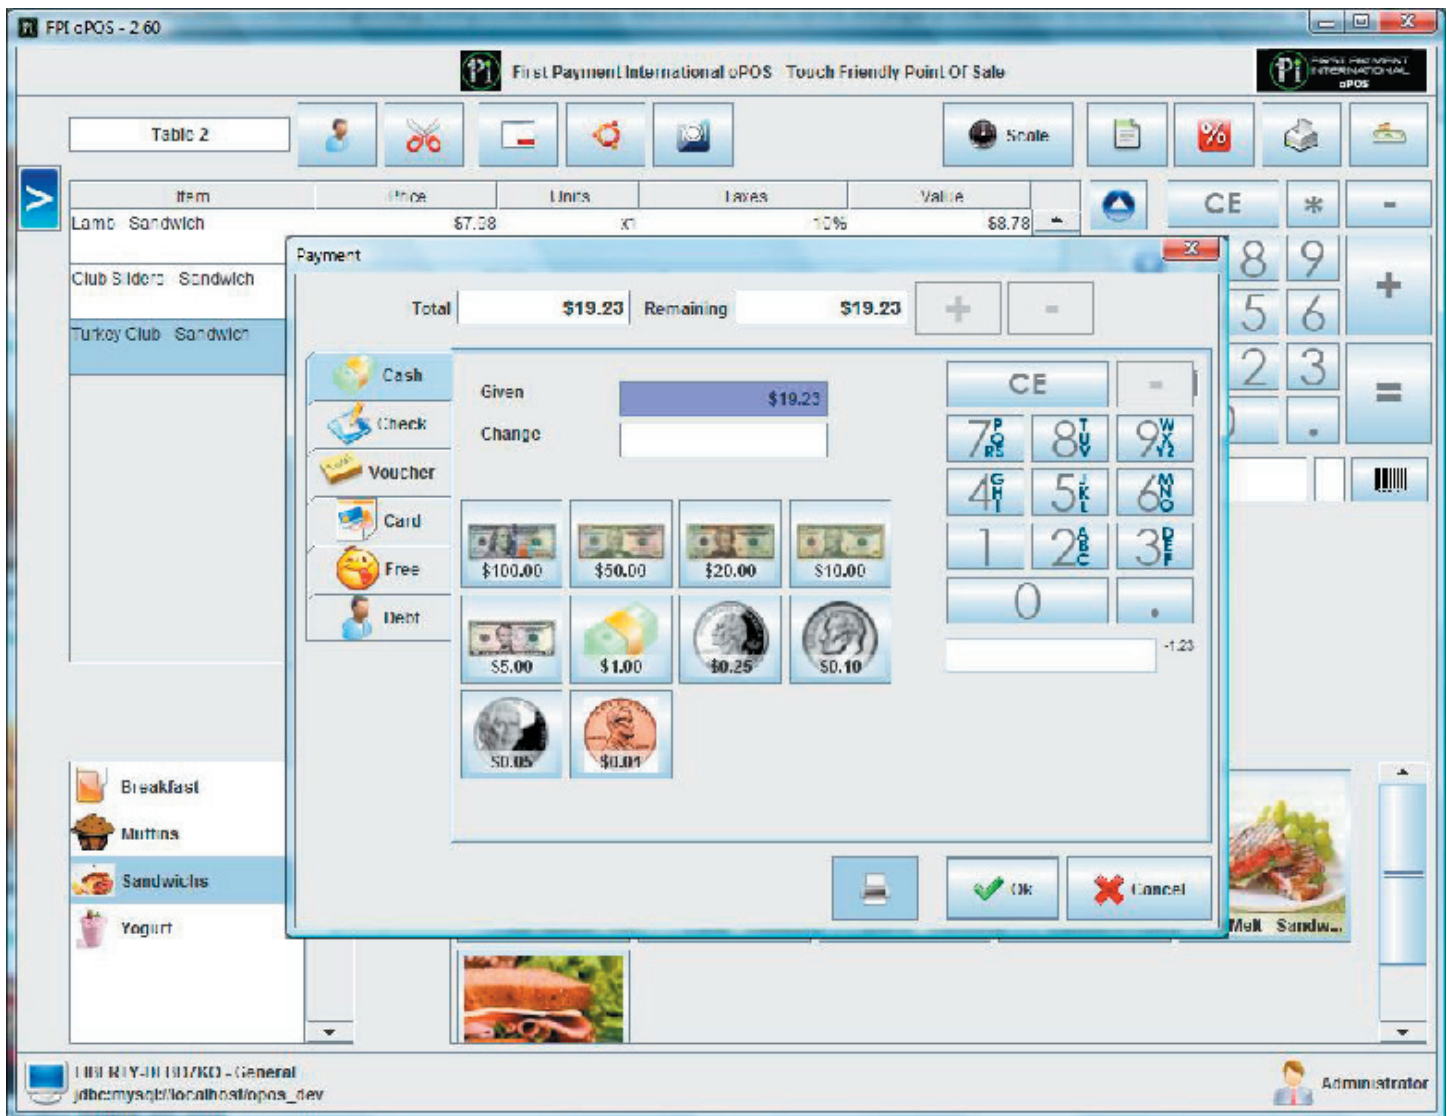

If the software is left un-attended for longer than 30 Seconds, it will log-out the current user and return to this screen.
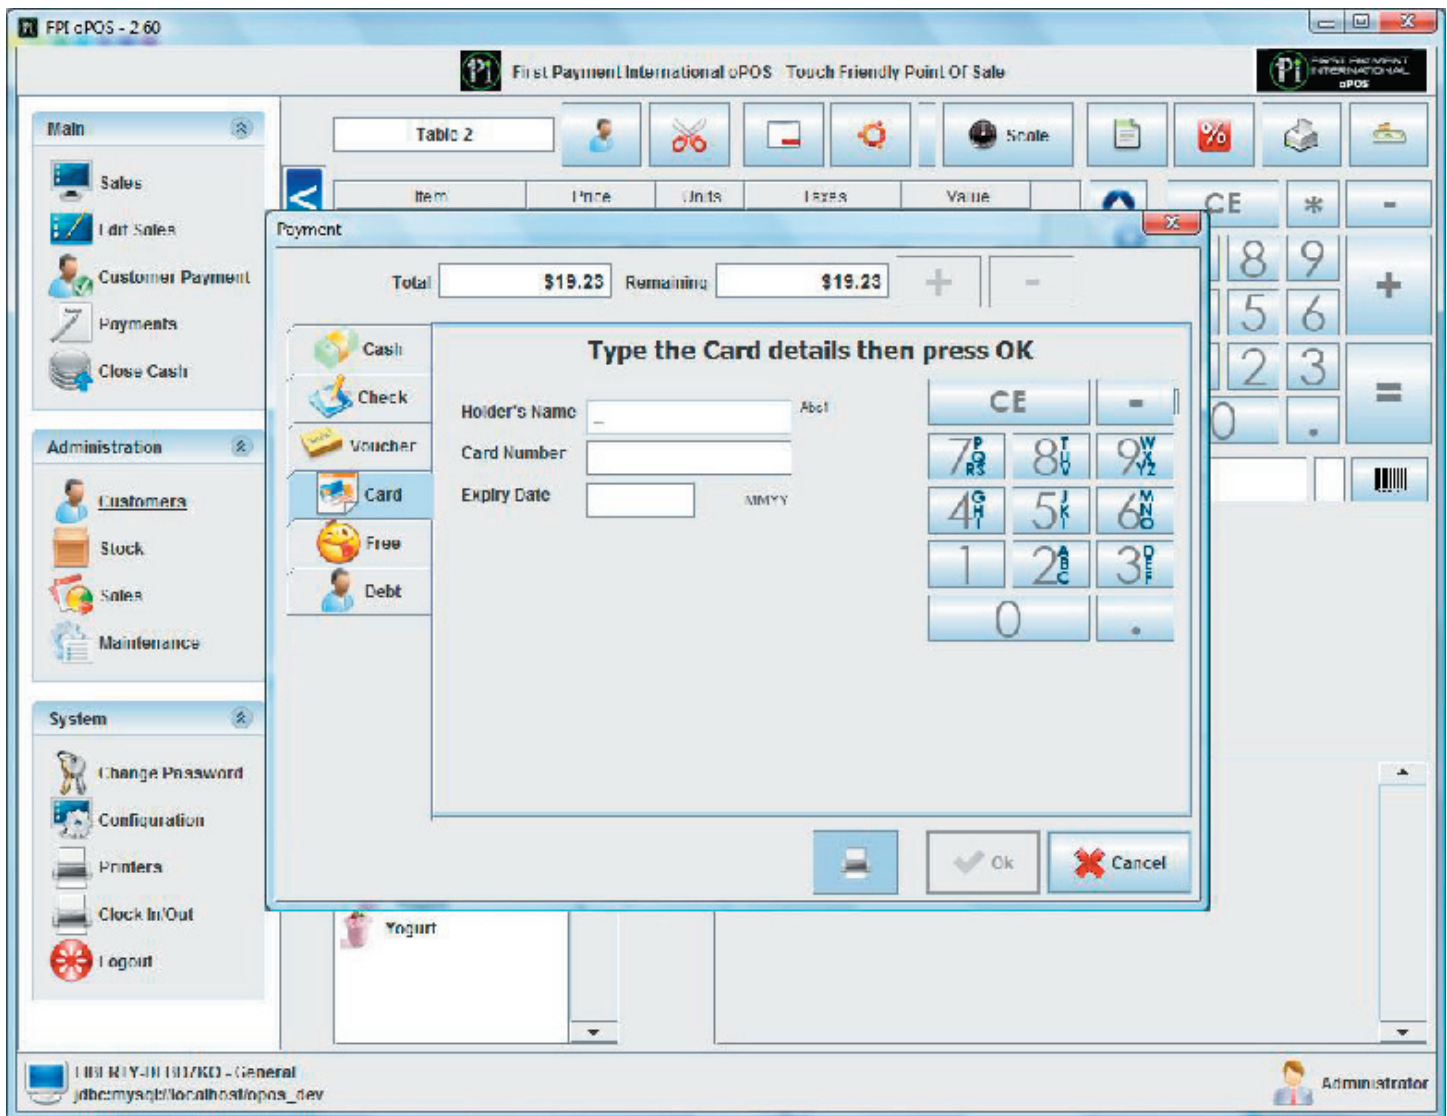

The Main Sales Screen

  The main screen offers a user friendly layout that allows employees to navigate through the oPOS with ease and comfort.
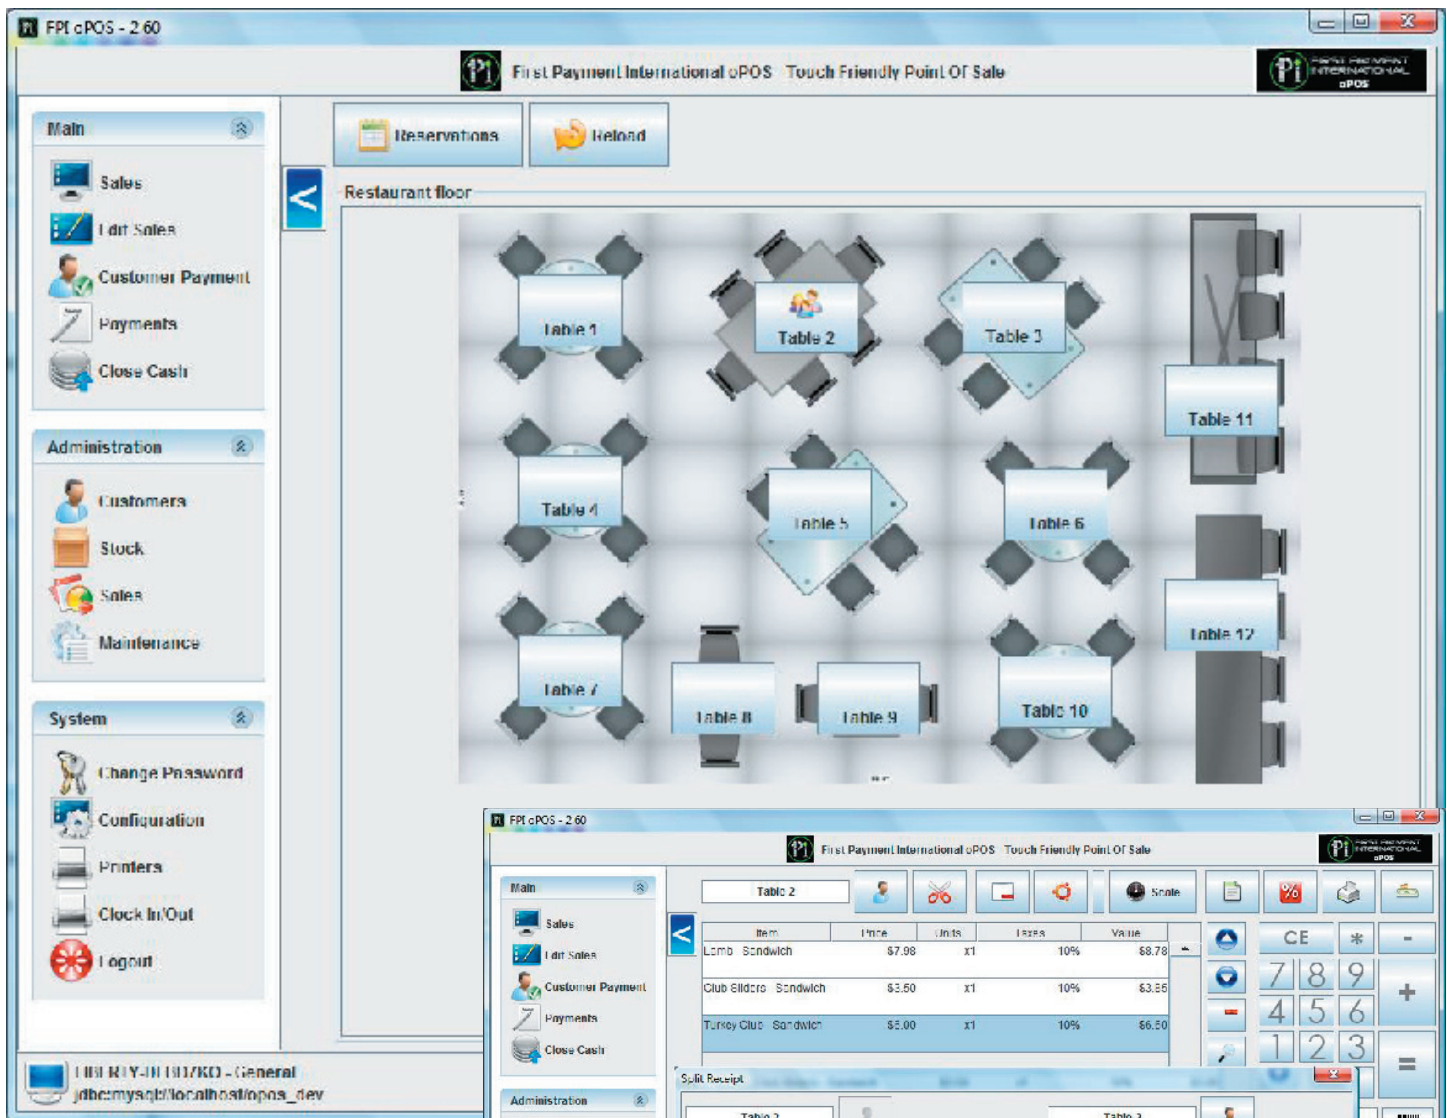

Completing a Sale with Cash:

Custom screen layouts, high speed credit card processing and packaged commands that allow the employee to complete the sale quickly.

**Completing a Credit Card Sale:**

The software is already coded to ensure that when the employee swipes the card that the name of the customer and expiration date is automatically filled in. Of course, the card number is captured but due to PCI compliance the full number is not displayed to ensure the utmost safety for the business owner.
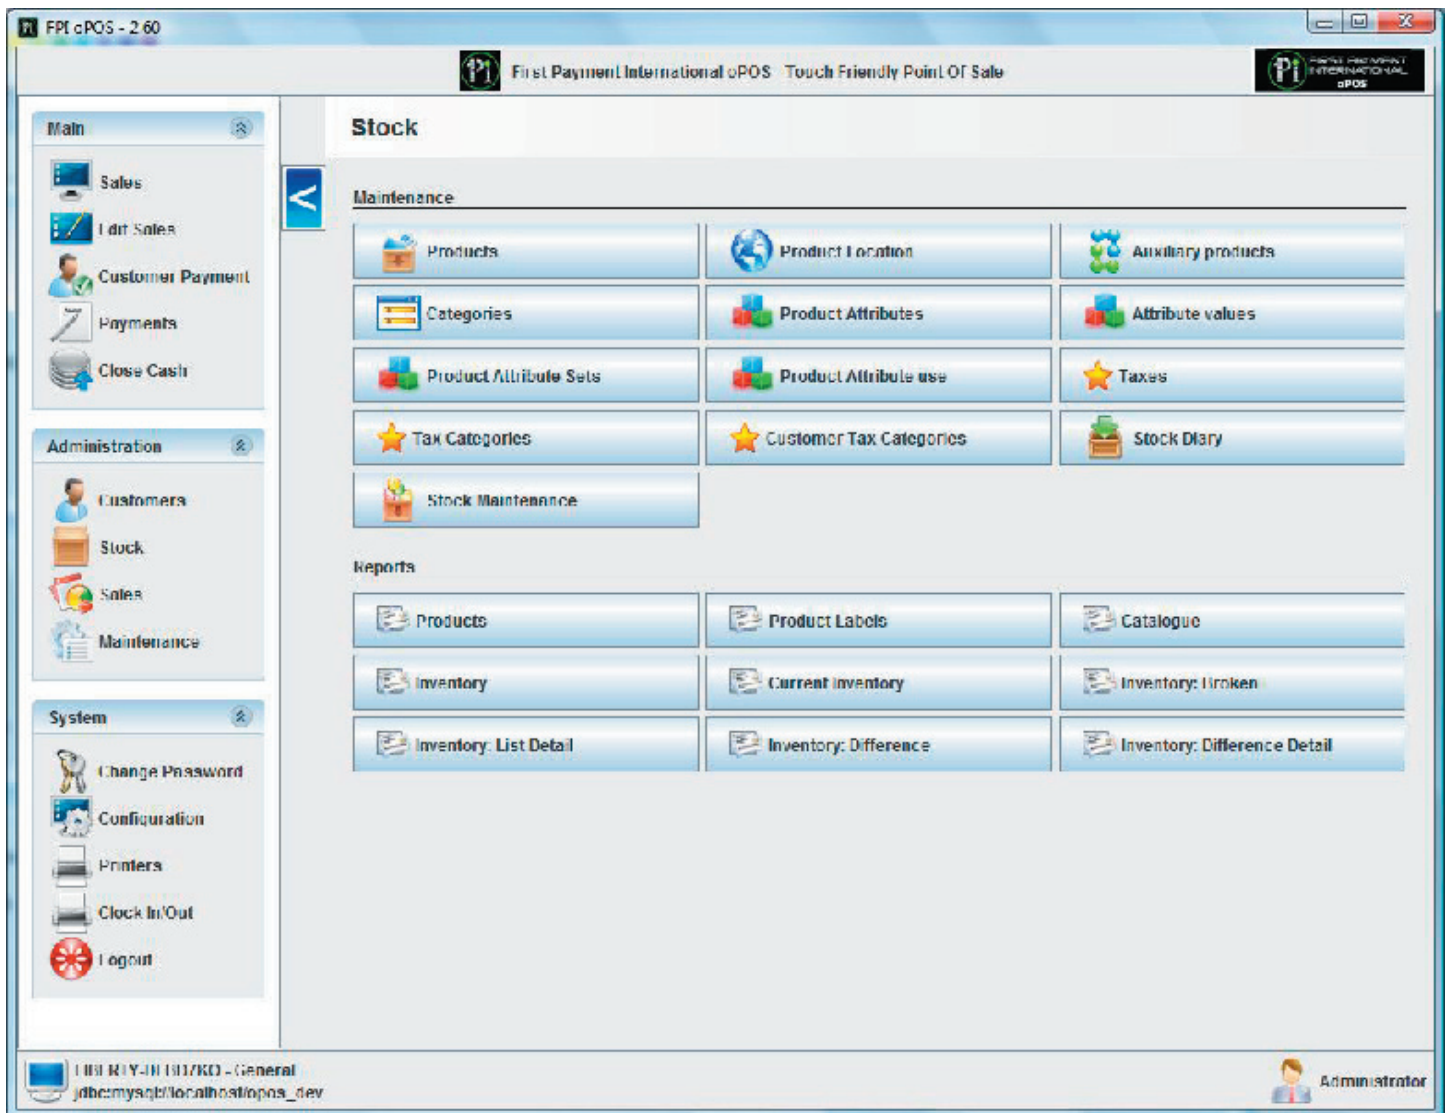

Restaurant Mode:

After Selecting the table, the software returns to the general sales screen.

Inset shows how a check can be split between multiple parties at one table.
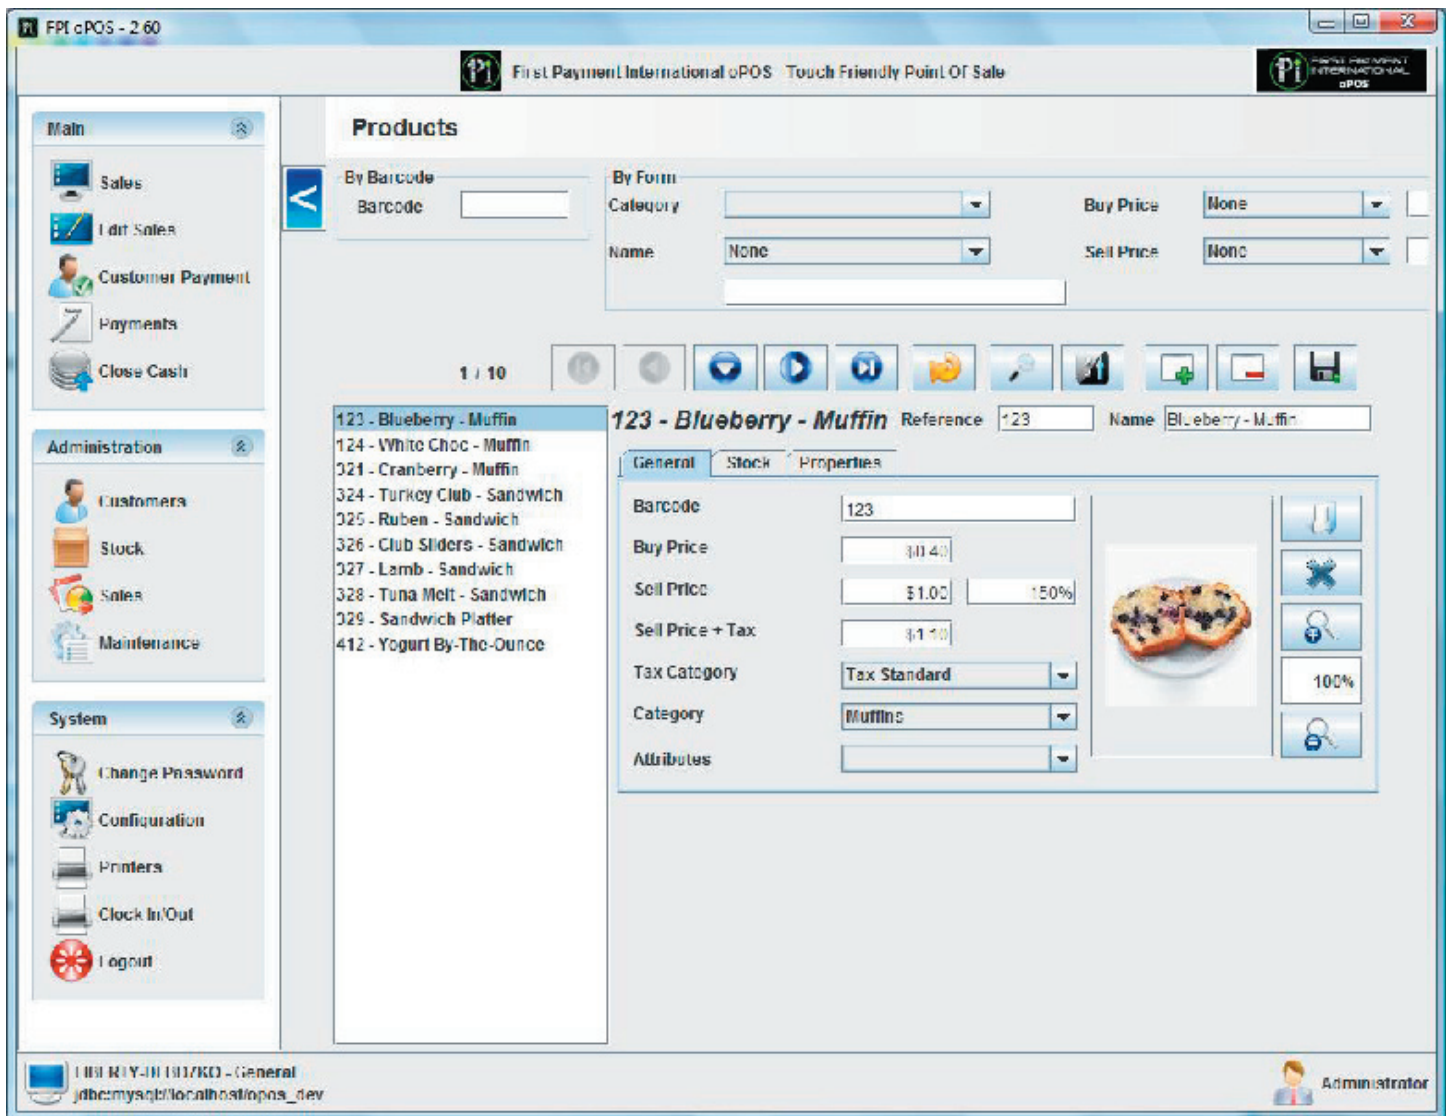

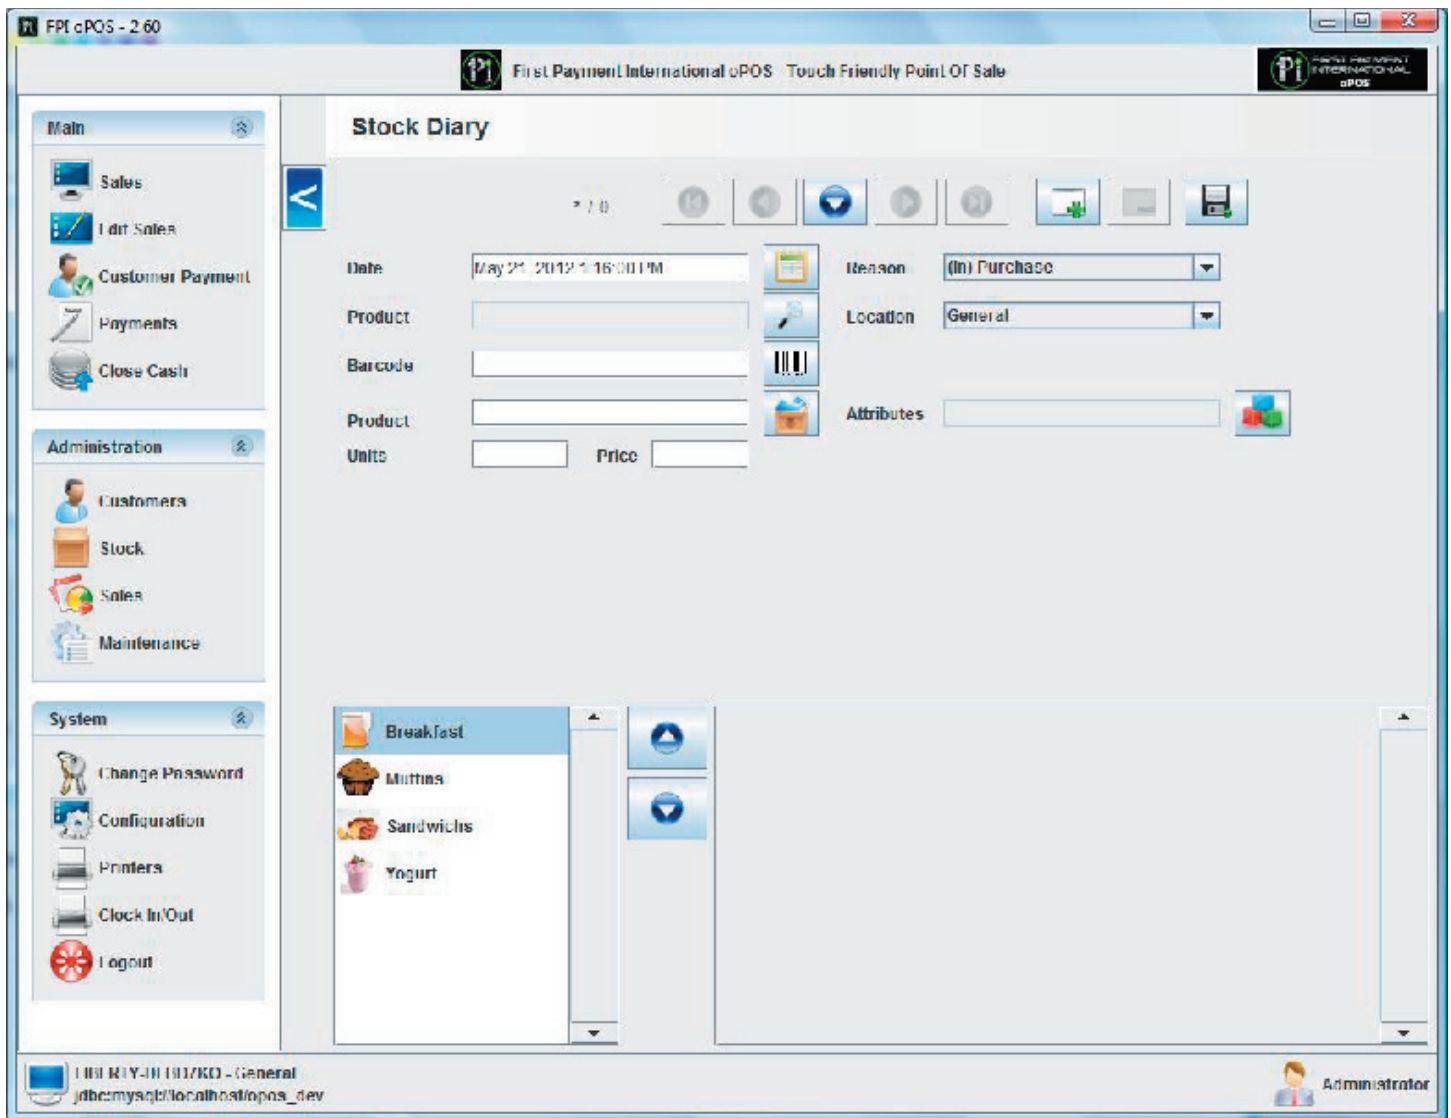

Maintenance:

　　Maintenance screen leads to many options including setting up products and categories.

Product Setup Screen:

In order for the reports to be correct the business owner will need to take the time to enter the correct information so that they know what is going on. In the product set-up screen the business owner will be able to pick categories and even give products a buying/selling price. This section is also important for the business owner to set-up the correct tax category for each product.

Stock Diary:

     FPI oPOS comes with inventory controls to help calculate current inventory, products and catalogues. This section will also allow the business owner to change product levels, price at which product is purchased and much more. It is also important for the business owner to be able to change product attributes, as they can change from season to season.

Reports:

     Customer Reports, Stock Reports, Sales Reports and Maintenance reports are all built into the system.

     The Customer Reports allows the business owner to track your customers to see what they're buying and how often they are coming.

     The Stock Reports or inventory reports use physical inventories, entered invoices and actual items sold to calculate numerous different inventory reports.

     Sales Reports allows the business owner to view anything from sales by user, product sales employee clock-in, clock-out and much more. The maintenance section of reporting will allow you to monitor your staff from password set-up through role management.
